Summary

Software Engineer with 1 year of experience in Java-based application development, proficient in Core Java, OOP, Spring Boot, and AWS cloud services. Aiming to contribute to end-to-end application development and support, delivering scalable and performance-driven solutions for enterprise clients.

Skills

Programming & Querying: Java, MySQL, MongoDB

Frameworks & Technologies : Spring Boot, Hibernate, J2EE

Cloud Technology: AWS[EC2, EBS, S3, Lambda, Fargate, Amazon RDS, Route53], Docker

Web technologies : HTML, CSS, JS(Basics)

Tools : Git, Jira, Bitbucket, Postman, Swagger, Putty

Experience

Associate Software Engineer

March 2025 – Present

TexasAI Pvt Ltd, Bangalore

- Worked on client projects “Whooster” and “Owlintel AI” in the law-enforcement domain, supporting data investigation and analysis workflows while ensuring secure handling of application data and adherence to project standards.
- Contributed to the design, development, validation, and support of Java-based backend applications using Core Java and Spring Boot, ensuring alignment with client requirements and delivery standards.
- Developed and maintained RESTful APIs for business-critical modules, enabling reliable data exchange and smooth integration across client systems.
- Supported application deployment and operations on AWS, including EC2, Elastic Beanstalk, S3, and Lambda, to ensure high availability and reliability of services.
- Participated in code reviews for assigned modules and ensured timely delivery of tasks in line with project timelines.
- Performed unit testing, debugging, and code optimization, and collaborated with cross-functional teams to deliver enhancements on time and meet SLA expectations.

Projects

PetShop Management | Java, MySQL

October 2023 – April 2024

- Designed and developed a Spring Boot-based backend application for pet inventory, customer management, orders, and billing, implementing RESTful APIs, object-oriented principles, and a layered architecture (Controller, Service, Repository) to ensure scalability and maintainability.
- Used MySQL as a storage base with JDBC improving data consistency, application reliability, and backend performance

Student’s Stress level Prediction | Java, Python-KNN, NB

November 2024 – May 2025

- Developed Spring Boot-based REST APIs to collect student data and integrate with Python-based machine learning models, enabling seamless communication between backend services and prediction modules.
- Implemented KNN and Naive Bayes algorithms for stress level prediction, and performed data preprocessing, validation, and result handling to ensure accurate and reliable prediction outcomes.

Awards & Certifications

- Led the personal project “Student’s Stress level Prediction” which was selected for the State-Level Exhibition by the Karnataka State Council for Science and Technology (KSCST).
- AWS Cloud Practitioner Essentials and Introduction to Cloud Computing – Digital Badges issued by Amazon Web Services (AWS), Agile Certification from Udemy.
- Achieved 4 belts in Karate, demonstrating discipline, perseverance, and commitment.
- 1st Place in 'Level Up' Hackathon – ME-RIISE, Malnad College of Engineering

Education

B.E. Information Science And Engineering

Malnad College of Engineering, Hassan

Graduated: 2025

CGPA: 9.3 / 10
